

**Amendments to the Claims:**

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A method of producing a transmissive screen having a light-transmissive substrate, lens members and light-absorption-material patterns, comprising:
  - forming the light-absorption-material patterns;
  - forming lens form restriction patterns;
  - discharging lens compositions of at least one of the lens members or precursors of the lens members towards the light-transmissive substrate; and
  - forming the lens compositions into the lens members as boundary portions of the precursors of the lens members are formed over the light-absorption-material patterns, and as the light-absorption-material patterns are formed.
